

# The Value of Value

A workshop with Judy Campbell

Value refers to the lightness and darkness in a colour. While selection of colour is very important in the successful design of a quilt, understanding how to manipulate variations in the value of these colours can make the difference between an 'ok' quilt and one that brings a 'wow' response

Class participants will each work at their own pace to produce a series of samples as each discovers a range of effects while manipulating changes in value

This can enhance not only the main body of the quilt but can make an enormous difference to backgrounds, borders and even bindings

These samples will become a valuable reference for future successful projects, rather than yet another UFO for those bottom drawers
